

# METADICHOL<sup>®</sup>

- Promote blood circulation in the brain
- Prevent cerebral thrombosis
- Reduce cerebrovascular disease
- Improve brain function
- Delay brain cell degeneration
- Improve mood

Dementia is a progressive decline in memory and cognition.

Dementia is caused by brain disease or a series of cerebrovascular lesions. There are many diseases that can lead to dementia, and age-related dementia is the most common.

The attention, executive, memory, verbal, mobility and social ability of dementia patient deteriorated and affected their quality of life. They may have personality or behaviour changes, struggled with day or night confusion, delusions or hallucinations.

## SYMPTOMS OF DEMENTIA:

- Memory loss
- Difficulty in recognise people face
- Decline verbal skills
- Poor judgment
- Time or place confusion
- Poor concentration or easily distracted
- Emotional & behaviour changes
- Lose enthusiasm or interest

# METADICHOL<sup>®</sup>

## Improves brain function, prevent Dementia

**METADICHOL** can achieve antioxidant and anti-inflammatory effects through the mechanism of increasing the level of vitamin C endogenously. It can reduce brain nerve from damage, prevent the deterioration of brain cells and cerebrovascular function, reduce blood lipids, blood pressure and prevent thrombosis from damaging brain function.

**METADICHOL** promote the synthesis of NMN which help in anti-aging, enhance brain and nerve function, improve energy level and effectively reduce diseases related to brain degeneration. **METADICHOL** can also increase serum ApoA1 protein and adiponectin levels which effectively improve blood lipid and blood glucose metabolism, promote blood flow to brain and avoid brain cell from hypoxia. In addition, **METADICHOL** can also reduce the elevation of D-dimer and lipoprotein (a) levels, effectively reduce cerebral thrombosis, prevent cerebrovascular stenosis or insufficient blood supply to the brain and reduce diseases such as cerebral infarction or stroke that further damage brain function.

### BENEFITS OF METADICHOL:

- Increase vitamin C level, anti-oxidation, anti-aging
- Anti-inflammatory, protect cranial nerve function
- Regulate blood pressure & improve blood circulation
- Increase the blood supply to the brain cells & avoid hypoxia of brain cells
- Reduce blood viscosity & prevent cerebral thrombosis
- Lower C-reactive protein & cholesterol
- Enhance brain & body coordination
- Reduce brain fog & improve critical thinking & judgment
- Improve memory & concentration
- Improve brain cognitive ability & mood
- Improve balance & avoid falls or accidents
